

The Cross Support System

Parts needed:

- (2) Long metal bars with hinged connect piece
- (2) Short metal bars with hinged connect piece
- Extra Velcro for side of frame

1. ASSEMBLY INSTRUCTIONS

- A. Insert one short cross piece into a long cross piece. Make sure the hinges are facing in the same direction.
- B. Repeat on the opposite pieces.
- C. Place cross piece on your Tumbler Trak with the hinge portion facing downwards. It should fit snugly on the edge covering the Velcro placed on frame. If you desire a more secure fit, place a piece of Velcro long enough to fit hinge portion, on the side of Tumbler Trak frame.
- D. Repeat the above process with the edge of hinge on frame touching previously secured cross piece hinge. The view from above will form a rectangular view.
- E. Your Cross Supports should already have Velcro on them. The soft (loop) Velcro should be placed on the bottom side next to the hinges and on opposite sides facing away from each other (outwards). There should also be some rough Velcro inside both edges of the hinged piece.
- F. You are now ready to place your Porta Vault or block on top of your Cross Supports, Velcro flaps pull securely down on the sides and under each cross piece.
